

PAD TEST

Take one (1) **Pyridium** or **Uribel** tablet two times a day for three (3) days. The medication will discolor your urine, based on the color of the tablet: **red with the use of Pyridium** or **blue if you have taken Uribel**.

Look on your pad and let us know if you see a discoloration on the pad or not.

Make sure you wipe well after urinating so that no remaining urine on your skin confuses the results of the test.
